

Grades K-6th

SELA Curriculum

SELA offers a vertically coherent curriculum aligned to enhance students' learning from one year to the next and equip them with the necessary skills for succeeding at all academic levels.

Our students receive a well-rounded education that combines academic excellence, physical growth, and creative expression. Aligned with the Massachusetts Standards, our curriculum incorporates elements from the Core Knowledge sequence, Singapore Math, and SEE, a social-emotional learning program. By fostering a passion for learning and providing students with vital skills and knowledge, we ensure they are well-prepared to succeed on their educational path.

Full Spanish & Mandarin International Curricula

From kindergarten through sixth grade, 60% of the instruction is delivered in a full Spanish immersion environment, except for English Language Arts, Math, and Mandarin. Students will enhance their fluency in the second language and their proficiency in the third language.

Global Citizenship Skills

SELA places a strong emphasis on guiding our students in building a profound understanding of the world at large, recognizing the interconnected nature of global challenges, and realizing their responsibility and ability to actively participate in the global community.

Lifelong and student-driven learning

SELA integrates mathematics, science, literacy, and computational programs into projects aimed at addressing genuine real-world issues. This approach enables students to engage in research, analyze various perspectives, generate innovative solutions, and ultimately develop prototypes.

Creative

SELA encourages the development of innovation skills through experimentation and learning from trial and error, enabling students to cultivate their natural creativity and curiosity.

Immersion

At SELA, students are taught in Spanish and Mandarin. Younger students are immersed in Spanish for all subjects, benefitting from improved syntax and fluent language skills. English-speaking students adapt well to the language switching, enhancing their cognitive abilities to discern when to use each language for effective communication.
